(54) RUBBER COMPOSITION, COMPOSITION UTILIZING WASTE GOLF BALL, AND ITS PRODUCTION

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a construction material, a paving tile or block or the like excellent in water permeability and elasticity.

SOLUTION: Waste golf balls are ground into pieces of a size of 0.1-15mm, and these pieces are fixed to form an object having clearances for water penetration.

Because a golf ball is made of a material which is an ionomer resin or a polybutadiene rubber excellent in durability and abrasion resistance, an inexpensive water-permeable paving tile or the like can be produced by using waste golf balls.
